DETAILED ACTION

Oath/Declaration

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

The correct filing date of 60/543868 is February 12, 2004. The Declaration filed November 17, 2009 has the filing date of 60/543868 as February 19, 2004. Please file a new Declaration with the correct filing date.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: This application teaches: (1) a ball point pen comprising a housing containing a ball point pen cartridge, wherein the ball point pen cartridge includes a ball tip and an indelible ink solution, and wherein the indelible ink solution includes an organic solvent system, a dye or pigment dissolved or dispersed in the organic solvent system, and an amino silane coupling agent; (2) an indelible ink solution comprising an organic solvent system, a dye or pigment dissolved or dispersed in the organic solvent system, and an amino silane coupling agent, wherein the solution includes between about 15 to about 20 weight percent of one or more amino silane coupling agents and (3) a pen reservoir comprising a housing including an indelible ink solution comprising an organic solvent system, a dye or pigment dissolved or dispersed in the organic solvent system, and an

amino silane coupling agent, wherein the solution includes between about 15 to about 20 weight percent of one or more amino silane coupling agents. The closest prior art of record is US Patent 4,045,397, issued to Parkinson and US Patent 5,652,286, issued to Deng. Parkinson teaches an ink composition for ink jet printing onto glass or ceramics surfaces comprising 2-30% by weight of a binder such as a novolac resin, 0.5-5% by weight of a dye such as a triarylmethane dye, 0.04-5% by weight of an organo silicon compound such as gamma-aminopropyltriethoxy silane and N-aminoethylaminopropyltrimethoxy silane and an alcohol solvent with or without a small amount of water but fails to teach or fairly suggest a ball point pen comprising a housing containing a ball point pen cartridge, wherein the ball point pen cartridge includes a ball point tip and the indelible ink solution or an indelible ink solution contains between 15 to about 20 weight percent of one or more amino silane coupling agents as claimed by applicants. Deng teaches an ink jet ink composition for printing onto glass, PET and aluminum surfaces comprising an organic solvent, 2-12% by weight of a dye such as Solvent Violet 8, a polyurethane binder, a silicone resin and 0.1-5% by weight of a silane such as (4-aminopropyl)triethoxysilane and [γ -(β -aminoethylamino)propyl]trimethoxysilane but fails to teach or fairly suggest a ball point pen comprising a housing containing a ball point pen cartridge, wherein the ball point pen cartridge includes a ball point tip and the indelible ink solution or an indelible ink solution contains between 15 to about 20 weight percent of one or more amino silane coupling agents as claimed by applicants. Accordingly, this application is allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
